**SYSTEC Introduces the Paramount Product Line**  
- Versatile solutions for museum storage applications

**Wales, Wis.** - The SYSTEC Group introduces the Paramount product line – a complete portfolio of museum storage products including cabinets, art racks, drawers, adjustable shelving, and shelving and drawer combinations.

From archeological artifacts to entomology specimens to rare paintings, Paramount products are designed and built to fit the unique nature and specific needs of a broad range of museum collections, while offering superior preservation storage and protection from elements that may pose a threat to a collection's safety.

"SYSTEC understands the challenges of managing and preserving irreplaceable artifact collections and we take our responsibility of providing the highest-quality museum storage solutions very seriously," explains Denise Harris, executive director of The SYSTEC Group. "The Paramount product line was engineered with the help of museum curators to ensure the highest level of artifact protection and ease-of-operability, no matter what the size or scope of a collection."

SYSTEC and its local consultant groups serve a variety of clients nationwide in the museum industry including prominent institutions such as the American Museum of Natural History, the New York Museum of Modern Art, the Brooklyn Children's Museum, the New York Botanical Garden Herbarium, the First Center of the Visual Arts, the Georgia O'Keefe Museum, the Harvard University Art Museum and the Stanford Alumni Museum.

-more-

Paramount cabinets are airtight, waterproof and designed to accommodate virtually any specimen or artifact collection storage need and use standard or custom-built storage housings to fit any height, depth or width requirement. Heavy-duty, reinforced steel construction provides extra strength and rigidity to accommodate large, heavy items. The product line also comes with a range of interior storage accessories including drawers, fixed compartments and standard or heavy-duty adjustable shelving to provide customized storage solutions. All Paramount cabinets, shelving and drawer units can be used in conjunction with high-density mobile storage.

Art racks provide a convenient compact solution for storing hanging artwork. The art rack system is suspended from an overhead beam that can either be mounted to an existing ceiling structure or to a self-contained overhead metal structure provided by SYSTEC. The pull-out racks allow for convenient, multiple-rack access.

Drawer units provide a flat storage solution for preserving art pieces or specimens. Paramount drawers are available with continuous handles or handle pulls and can be designed and built to a wide range of length, width and depth specifications. They can be incorporated into a free-standing unit, configured into a cabinet or used as part of a shelving range. For small artifact storage applications, drawers come with slotted interiors for configurable drawer dividers. Pull-out trays, utilizing slotted tray runners permanently welded into cabinets, are easily removed for specimen work.

Adjustable shelving features four-post construction, which offers strength and absolute flexibility. A universal bayonet mounting system, one-inch on center, accommodates adjustable shelves or full-extension shelf glides. The four-post configuration allows for front-to-back storage clearance that is ideal for deep shelf applications. The universally compatible mounting system also accepts drawer mounts for combination storage applications.

-more-

Shelving/drawer combinations are ideal for situations calling for multiple storage options. Paramount four-post shelving uprights with universal mounts provide an interchangeable storage option using either drawers or shelving in the same range.

SYSTEC specializes in the design and delivery of fully integrated or individualized information and materials management solutions. From storage and space-saving products to information management and electronic document systems, SYSTEC professionals provide decades of experience, expert product knowledge and customer service, all from a single source.
